Abstract

The Head of the Study Program, lecturers, and the Accounting Computerization Student Association of STMIK Mardira Indonesia's Class of 2020 and 2021 have formed a community service team to tackle the problem of SMAN 2 Lembang students' need for comprehension when it comes to using applications. The team's primary focus in this project was creating and instructing accounting students on how to utilize the Accurate 5 Accounting Application. This project's primary goal is to increase students' comprehension of and proficiency with accounting software, which is crucial for equipping them with obstacles in the workplace. Practice-based learning and practical training are the approaches employed. The project has led to a notable improvement in the student's comprehension and proficiency with the Accurate 5 Application. In conclusion, SMAN 2 Lembang students' technical abilities have improved significantly due to this community service project, particularly in the area of digital accounting, and it is anticipated that these gains will last for a long time.

Keywords: *Accounting Application Training, Accurate 5, Accounting Education, Student Skills Improvement*

Introduction

The community service team of lecturers and students from STMIK Mardira Indonesia recently finalized a project to support MA Muhammadiyyah 1 Bandung. The project, which included needs assessment, online profile development, and website management training, was executed with unwavering devotion and commitment from each team member.

Upon the successful completion of the project, the team leader and members convened to contemplate their experience. The resolution to safeguard Intellectual Property Rights (IPR) for the generated intellectual work was a significant milestone in the project's conclusion. The team's deep respect for the creativity and innovation inherent in the MA Muhammadiyyah 1 Bandung online profile was a key factor in this decision.

In a contemplative setting, the community service team of educators and students from STMIK Mardira Indonesia determined that the initiative had yielded a valuable answer for MA Muhammadiyyah 1 Bandung. To maintain the project's survival, it is essential to empower website management, develop collaborations, and persist in evaluations to improve the services offered. Dedication is essential to consistently enhance the utilization of the internet profile for MA Muhammadiyyah 1 Bandung. The community service team, including instructors and students from STMIK Mardira Indonesia, asserts that adherence to these recommendations will yield immediate advantages and establish a basis for extensive development and empowerment in the future. They are filled with hope and optimism, anticipating that each incremental action will yield concrete beneficial transformations for MA Muhammadiyyah 1 Bandung and its stakeholders.

Financial reports are the output of the accounting process, helping people and businesses make decisions. Identification, documentation, and communication of actions are all part of the accounting process (Economics et al., 2021). Humankind can benefit greatly from technological progress in numerous ways. For example, information technology can improve

business productivity by automating tasks usually completed by hand (Kristian, n.d.).

Accounting software makes accounting tasks like recording, producing, and distributing financial reports much more accessible. Thus, in order to succeed in the industrial sector, one must possess both accounting application knowledge and abilities. The use of accounting software has various advantages. Research on this software's usage demonstrates that it improves users' internal and external performance. Accurate is an accounting program that works well for most businesses in our nation (Mariani et al., 1956).

PT. Cipta Piranti Sejahtera improved Accurate, an accounting program created by Indonesians, and rebranded it as CPSSoft in 1998. 1999 saw the release of the first product, Accurate 2000. Furthermore, the business keeps developing According to Indonesian tax laws, accounting standards, and user needs (Suaidah et al., 2022).

Method

A community service team from STMIK Mardira Indonesia's 2020 and 2021 cohorts, including the study program leader, professors, and Computerized Accounting Student Association members, started an outreach effort to support SMAN 2 Lembang in West Bandung Regency, West Java. The team's primary focus shifted to the school's difficulties in preparing its students for higher education and the workforce, specifically in learning technology-based accounting software. The learning process frequently encountered challenges because of a lack of resources and technical expertise, which hindered its efficacy in helping students master current accounting technologies.

The first important step was to understand the institution's needs. To ascertain learning needs and pay attention to the expectations and aspirations of all parties concerned, the community service team conducted extensive discussions with the school, including instructors and students.

The next step was to create a well-organized strategy outlining the required steps, assigning the proper resources, and scheduling a successful training project.

With the Accurate application, the training really got underway. The team, dedicated to the cause, worked tirelessly to create and provide training materials specifically suited to SMAN 2 Lembang students' needs. The pupils had more experience with using the Accurate application once the materials were prepared, the training was given, and their skills were assessed. The team's work was far from done, though.

The STMIK Mardira Indonesia community service team, consisting of lecturers and students, continues to offer extra support to the instructors and students, ensuring they learn enough to utilize Accurate in practical situations inside and outside the classroom. Information management, financial data analysis, and platform utilization were the course's main topics.

Following the instruction, the group closely monitored and assessed the kids' skill growth. They sought to guarantee that the training fulfilled the school's needs, actually improved the pupils' competencies, and produced the anticipated results. Increased student participation in accounting practicum activities was also implemented to boost their self-esteem and better equip them to handle obstacles in higher education and the workforce.

The STMIK Mardira Indonesia community service team is optimistic that this initiative will offer SMAN 2 Lembang and the larger educational community beneficial and long-lasting solutions. They aim to have a significant positive influence on the school and the future of its students through strong teamwork and unwavering dedication.

Results and Discussion

As part of the Tri Dharma of Higher Education, the director of the study program, lecturers, and the Computerized Accounting Student Association from STMIK Mardira Indonesia's 2020 and 2021 cohorts conducted a community service project on February 11, 2023. This project aimed to help

the larger community, especially by teaching SMAN 2 Lembang students how to use the Accurate program—the training aimed to improve the student's proficiency with appropriate digital technologies for accounting and finance management.

As part of this volunteer endeavor, the group developed a cutting-edge instructional course called "Training on Accurate 5 Accounting Application for SMAN 2 Lembang Students." The main goal was to impart useful knowledge and abilities for utilizing Accurate, an accounting program that is not only frequently used in company and industry but also highly relevant for effective financial administration.

Figure 1. Location of Community Service Activities

Through this training, the community service team wanted to give students valuable skills for the workforce and increase their comprehension of information technology's role in financial management. It was hoped that SMAN 2 Lembang students would be more equipped to handle issues in the future, especially in the finance and accounting domains

Figure 5. Display of Goods Information

This community service program aimed to improve money management and acquire valuable skills for SMAN 2 Lembang students. It is envisaged that students will be able to impact society and the professional world favorably with these talents in the future..

Conclusion

A group of professors, the Head of the Study Program, and the Computerized Accounting Student Association (2020 and 2021 classes) from STMIK Mardira Indonesia conducted a community service project that involved training SMAN 2 Lembang pupils. Every stage of the process,

from planning to implementing the Accurate application training, was done with passion and conviction.

The SMAN 2 Lembang pupils have reaped significant benefits from this community service project. The Accurate 5 Accounting Application Training, a resounding success, has significantly improved students' technological proficiency in accounting. This achievement underscores the potential of the right methodology to greatly enhance technical skills, preparing students to tackle real-world problems in the workforce. The community service team is optimistic that this training will pave the way for further development of SMAN 2 Lembang's accounting curriculum.

The STMIK Mardira Indonesia community service team feels that by implementing these suggestions, the training program will benefit students immediately and set the stage for future student empowerment. They hope every tiny action made as a result of this training will result in accurate and beneficial changes for the students and the school community.
